Natural capitalism in a sentence

Its importance, however, is relatively modern growth and in the early history of Württemberg was overwhelmed by Cannstatt, whose central situation on Neckar seemed to mark it as the natural capital of the country. Constance is the natural capital of Thurgau, so when in 1460 the Swiss won this region with the Austrians, the city and the Swiss Confederation should naturally be interconnected. Since then, his neighbour Chalcis, who, although suffering from a lack of good water, was, as Strabo says, a natural capital from his eurip command, possessed unquestionable superiority. Midea and Tiryns form a group of cities founded by immigrants in opposition to Argos; the natural capital of the plain and a stronghold of the native race. The above examples of word usage have been collected from various sources to reflect current usage and history. They do not represent the opinion YouxDictionary.com. A. The definition of natural capital is the Earth's environmental resources, which provide the environmental goods, flows and services necessary to support life. Examples of natural capital include: minerals; water; assimilation of waste; absorption of carbon dioxide; arable land; habitats; fossil fuels; erosion control; recreation; visual palsy; biodiversity; temperature and oxygen regulation. Natural capital has financial value because the use of natural capital drives many companies. B. Main features of current business practices; patterns of development; environmental changes; exploitation of resources from other countries, and government policy demeanes or reduces natural capital stocks. This has not only financial consequences, such as an increase in market prices due to depletion of resources, but also environmental consequences, as services provided by ecosystems are damaged and cannot function effectively, which in turn has an impact. For example, as greenhouse gas emissions increase and areas responsible for carbon sequencing decrease, global temperatures rise, weather change, sea level rise, terrestrial and aquatic ecosystems are transduced, and land use patterns change. Natural income is cash income derived from natural capital. However, the protection and proper pricing of environmental resources has been largely under-reported by economic theories and practices. If economic and social development can develop, natural capital resources will continue to decline, causing problems with natural life support systems, rising market prices and a decline in the quality of human life. Not all natural capital services or products can be replaced by technology, and some alternatives are expensive or inefficient. Problems related to the protection of natural capital include the inability of the economy to properly model and value both market and non-market environmental resources; non-willingness to pay; lack of knowledge about the levels or time intervals required for resources to replenish or renew; lack of knowledge about the interaction and relationship between resources and their actual value, usability or necessity; poor management of cross-border resources; inequalities between developed and developing countries. The concept of natural capital is used in other sustainability concepts and tools, including ecological footprints, environmental accounting and environmental performance. C. Case studies and examples 1. Natural Capital Calculation Dixon and Hamilton (1996) tried to calculate natural capital inventories in terms of U.S. dollars per capita and percentage of stocks for different regions of the world. It turned out that the high percentage of natural capital of most regions took the form of agricultural land. The Middle East had the highest economic value at \$63,041 per capita, of which 88% of its natural capital was in the form of minerals and fossil fuels. 2. Natural Income In 1997, the World Resources Institute (WRI) estimated that the global pharmaceutical industry had acquired \$75-120 billion from products using natural resources. 3. The Watt Sea Dutch coastal wetlands of the Watt Sea provide natural capital in the form of climate and water regulation; protection against soil erosion; habitat functions; biological control; treatment of waste; production of food and raw materials; recreation; education and storage of solar energy. Coastal wetlands are fragile and are under pressure from population growth, pollution and land reclamation. The Watt Sea study identified its hazards, portability and life-sustaining value of various natural capital functions. D. Target sectors/ Stakeholders Natural capital is a concern of all. However, economists, governments, NGOs and research institutions are responsible for developing policies and actions to protect natural capital. E. The scale of the activities of enterprises and primary industries is well prepared to reduce the negative impact on natural capital and to protect existing resources. F. Links These examples come from corpora and from sources on the internet. Any opinions in the examples do not reflect the opinions of the editors of the Cambridge Dictionary or Cambridge University Press or its licensors.
